THE MACHINE

An edge you feel is a guess. An edge you can backtest is a fact.

Most of what passes for quantitative trading online is a feeling wearing a chart. This is the track that replaces the feeling with a method you can test, deploy, and watch.

6

Structured stages, Foundation to Institutional Elite.

400+

Hours of video, growing 20+ a month.

1,308

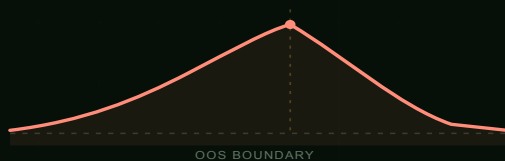

Methodologies documented.

Most “backtested strategies” online were never actually tested.

A rising equity curve is not proof of an edge. It is proof that a curve was drawn. The difference is entirely in the method, and almost nobody shows their method.

MOST BACKTESTS

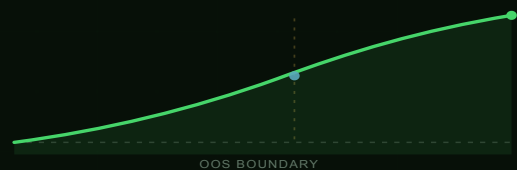

What they show you

Tuned to the exact period being tested, entered on bars that already happened, and costed as if trading were free.

HONEST VALIDATION

What we teach

Entries only on the next bar's open, so nothing peeks at its own future. Real Indian brokerage, STT, and slippage. Tested with PBO and DSR, the statistical checks built to catch a curve that was tuned to the past rather than genuinely earned.

YOU DO NOT GET A VERDICT. YOU GET THE EVIDENCE.

The Backtester never tells you a strategy is good. It hands you the file and lets you decide.

Equity Curve

Capital over time.

Drawdown Profile

Every dip, measured.

R-Multiple Histogram

The shape of the wins and the losses.

Monthly Returns Heatmap

Month by month, in one glance.

Trade Log

Every trade, sortable and exportable to CSV.

A verdict asks for your trust. An evidence file invites an audit. **We built the second one.**

Three deliverables, one for each Mastery stage, none of them a certificate.

This track does not end in a diploma. It ends in three specific things you can open and check.

04

A validated strategy report.

Backtested honestly, checked for overfitting, costed against real Indian trading conditions, and written up the way a research desk would write it up.

05

A live, deployed system.

Broker-connected, monitored for drift, with an incident playbook for the day something breaks.

06

A portfolio built to an institutional standard.

Multiple systems, sized and risk-managed together, the way a buy-side desk actually runs money.

Most courses hand you a certificate. **This one hands you three things you actually built.**

- **Code from the first day.** Stage Four opens with Python and never steps back from it.
- **Everything deployed, not just written.** Stage Five ends with a system your broker can actually see.
- **Every decision has a paper trail.** Each deliverable is written up, not just built.
- **The portfolio is the capstone.** Stage Six ties all three systems into a single risk-managed whole.

We will never tell you what to buy or sell. We teach you how to decide.

Six stages, taught in English, Hindi and Kannada. Three tracks run at once in every stage: core trading, technical analysis, and an AI companion. Never tips or signals.
